Geopolitical Headwinds — External Impact & THAI's 2026 Strategy

IMPACT

Fuel Expenses and Operation Limitation

- **Sharp increase in jet fuel price:** Jet fuel price increased dramatically from USD100/bbl at pre-war period to the peak of USD240/bbl in April and normalized around USD130-150/bbl. For Q2/2026, jet fuel expenses for THAI has increased by 70% YoY and QoQ.
- **Airspace Restrictions & Yield Volatility:** Geopolitical conflicts and airspace closures necessitate route diversions, driving up block hours and operational costs. Meanwhile, the conflicts also created sudden passenger demand shifts and sharp yield volatility across key international traffic flows.

Transportation Market Landscape

- **Competitive pricing strategy** by some airlines in order to boost cabin factor ad overall revenue with expectation to offset higher fuel cost. This is mainly driven by limited liquid assets on hand.
- **Regional Market Competition & Connectivity Gaps:** Competition across regional routes and standalone network constraints require strategic codeshare partnerships and airline alliances to capture feeder traffic and defend market share.

FX Movements

- USD strengthening vs THB; net FX impact actively managed through hedging program

THAI'S RESPONSES

Risk Mitigation Measures

- **Operational War Room:** Established to closely monitor external/internal factors (jet fuel prices, geopolitical tensions, flight operation etc.).
- **Fuel Hedging & Efficiency:** Implemented strict fuel hedging policy guidelines + enhanced operational fuel efficiency.
- **Network & Capacity Optimization:** Dynamically adjusted routes and flight frequencies to align with changing passenger demand.
- **Cost & Capex Controls:** Deferred non-essential capital expenditure projects to safeguard liquidity and cash reserves.
- **Stress Testing & Scenario Analysis:** Continuous impact assessments to maintain operational readiness & agility.
- **3 Major disciplines for Thai Airways in 2Q26**
  - **Capacity discipline :** Reduced ASK by 4.4% yoy in Q2/2026 for some Asia and Europe routes in order to reduce the impact of extremely high variable cost.
  - **Yield pricing discipline:** Via fuel surcharge adjustments, revenue management initiatives, and fare optimization to reflect higher operating and fuel costs.
  - **Revenue mix discipline:** Balancing sales between P2P and network. More focus on premium classes which are less price sensitive.

Focus on yield discipline rather than boosting cabin factor in order to protect profitability

- Passenger yield has increased by 20% YoY and cargo yield has increased by 30% YoY.
- THAI has large liquid assets of more than THB120bn which allow the company to not follow pricing dilemma.

Revenue Management Alliance Airline Network

- **Air India Partnership (MOU):** Signed MOU to explore interline partnership & finalize codeshare agreement within 2026 using "TG" & "AI" codes on Thailand-India and international routes.
- **Network Growth:** Increases regional connectivity, builds foundation of route network strength, and supports economic & tourism growth in the long term.

Cost Management

Fuel hedged:

- Currently, the Company adopts a Brent (crude) hedging policy using up to 12-month forward Zero Cost Collar, covering approximately 60% of consumption
- Hedging Status: ~50% of consumption (Q2/2026); ~40% of consumption (2H/2026)

FX hedge (Currency Hedging Policy):

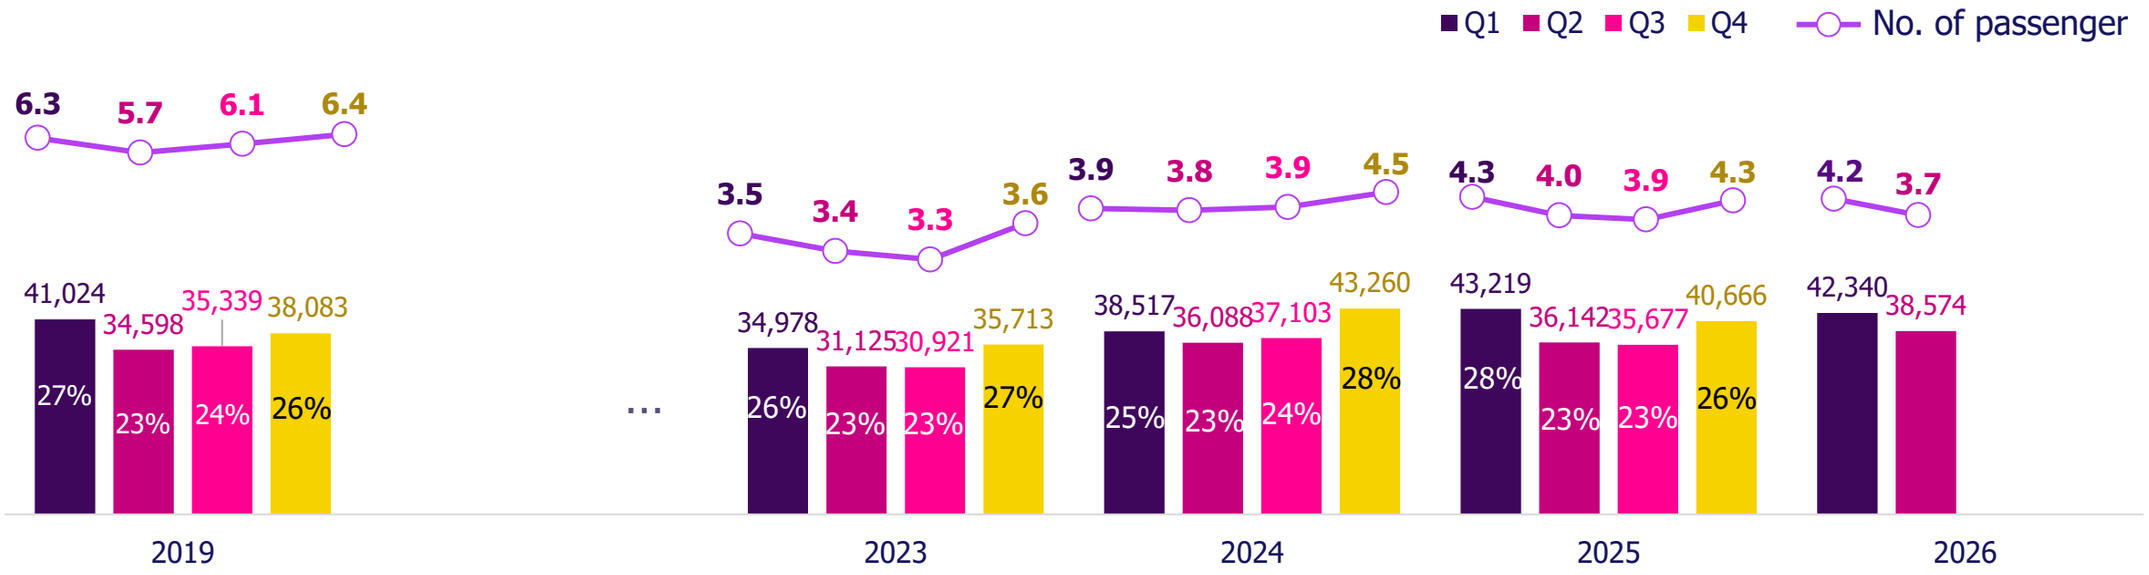
- Natural hedge through matching revenues and expenses; THAI also mitigated FX volatility on USD Aircraft Leases by entering CCS and Par Forward transactions.

Q2–Q3 Softness In Line With Established Seasonal Travel Trends

THAI Passenger and Passenger Revenue Contribution by Quarter

No. of THAI Passenger (mm persons)

Passenger Revenue by Quarter (THB mm) and Contribution



Seasonality pattern for THAI performance

Q1 (Chinese New Year, school break) and Q4 (year-end holidays) remain the high-season for THAI passengers and revenue contribution. This will allow THAI to boost passenger yield generation.

Meanwhile, Q2 and Q3 have fewer major travel-triggering holidays, especially for outbound Thai and regional travelers. Rainy season in Thailand (May–Oct) soften inbound leisure demand. The 'Network Strategy' will be implemented for stabilizing cabin factor and profit contribution.

THAI's Network Captures Value Beyond Tourism and Serves Diverse Global Markets

Cabin Factor (%)	77.0%	71.5%	80.2%	77.4%
Passenger Yield(1) (THB/RPK)	2.66	3.20	2.79	3.05

Overall Passenger Business for THAI

THAI demonstrated resilience amid a challenging operating environment:
Despite softer travel demand following Middle East unrest:

- **ASK** declined by 4.4% YoY in 2Q26 and 3.2% in 1H26, reflecting flight frequency reductions on selected Asian and European routes in response to weaker demand and market conditions.
- **Cabin factor** decreased to 71.5% in 2Q26 (from 77.0% in 2Q25) and 77.4% in 1H26 (from 80.2% in 1H25), primarily driven by lower passenger traffic, particularly on international routes affected by geopolitical uncertainties.
- **Passenger yield** increased to THB 3.20/RPK in 2Q26 (+20.3% YoY) and THB 3.05/RPK in 1H26 (+9.3% YoY), supported by fuel surcharge adjustments, revenue management initiatives, and fare optimization to reflect higher operating and fuel costs.

THAI Smooth as silk

Remark: (1) Passenger yield exclude revenue from excess baggage

Historical Operating Expenses

Cost per Available Seat Kilometer (CASK) / Revenue from Sales and Services

		2Q 2025	2Q 2026	1H 2025	1H 2026
		Unit: THB per ASK			
Total CASK	Total CASK	2.068	2.775 ↑	2.154	2.498 ↑
	Fuel expense	0.643	1.160 ↑	0.680	0.902 ↑
	Non-fuel expense	1.425	1.615 ↑	1.475	1.596 ↑
		Unit: THB per ASK			
Aircraft-Related Expense	Flight service expense	0.274	0.285 ↑	0.276	0.284 ↑
	Aircraft rental, DA, finance cost (1)	0.260	0.160 ↓	0.257	0.234 ↓
	Aircraft repair and maintenance expense	0.235	0.292 ↑	0.269	0.292 ↑
		Unit: % of Revenue from sales and services			
Other Operating Expense	Employee benefits and crew expenses	10.4%	9.7% ↓	9.3%	9.9% ↑
	Selling and advertising expenses	5.1%	5.5% ↑	4.9%	5.3% ↑
	Other expenses (2)	11.1%	16.0% ↑	11.1%	12.6% ↑
Market Factors	Avg Jet Fuel Price (USD/BBL)	91.5	187.2	95.9	143.6
	Avg Foreign exchange rate (THB/USD)	33.1	32.6	33.5	32.1

Fuel Expenses

- **Fuel expenses** increased significantly YoY in both 2Q26 and 1H26, mainly driven by the sharp increase in average jet fuel prices following the Middle East unrest. Average jet fuel price rose by 104.6% YoY in 2Q26 and 49.7% YoY in 1H26, despite lower flight activity and the appreciation of the Thai Baht.

Non-Fuel Aircraft-Related Expenses

- **Flight service** increased slightly YoY, reflecting cost pressure despite lower flight frequencies and favorable foreign exchange movements.
- **Aircraft rental expenses** declined, benefiting from fleet ownership optimization and lower finance costs following debt repayment under the rehabilitation plan.
- **Aircraft repair and maintenance expenses increased YoY,** mainly due to a larger operating fleet, higher engine overhaul costs, and the recognition of estimated early return expenses for Boeing 787-8 aircraft.

Other Operating Expenses

- **Employee benefits expenses remained well controlled,** although 1H26 increased slightly due to a higher number of employees supporting business expansion.
- **Selling and advertising expenses increased YoY,** primarily from higher sales-related expenses e.g. credit card fees and commercial activities.
- **Other expenses increased YoY,** driven by higher depreciation and amortization, inventories and supplies consumption, and aircraft-related support costs amid fleet expansion.

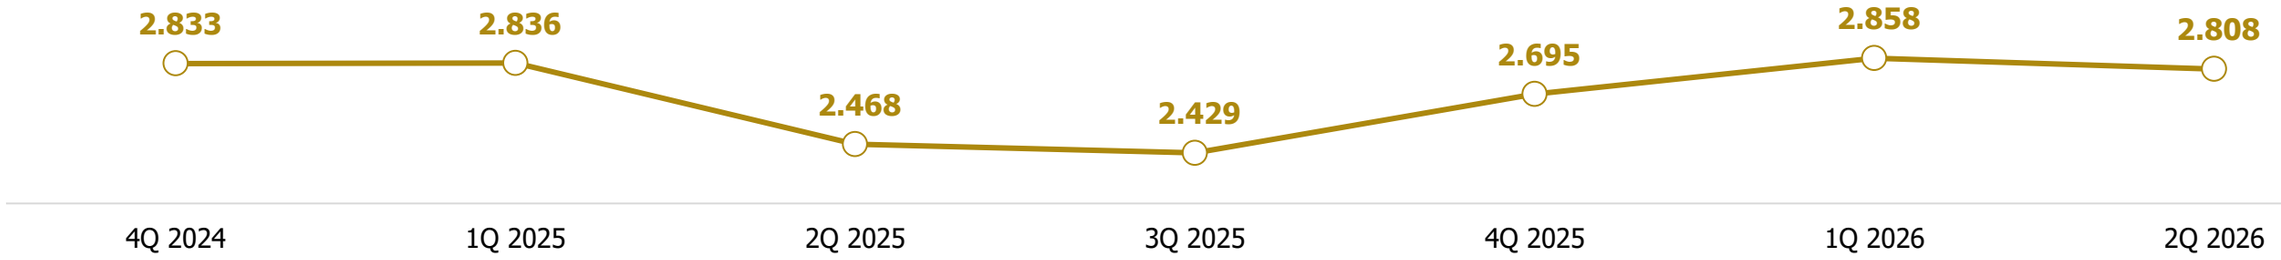
THAI Smooth as silk

Remarks: (1) Aircraft rental, depreciation expenses, and finance cost include lease of aircraft and spare parts, depreciation and amortization of aircraft expenses, and finance cost on lease liability
(2) Other expenses include inventories and supplies used expenses, depreciation and amortization of non-aircraft assets, and other expenses such as office rental fees, insurance expenses, utility expenses and general services etc.

Operating Spread

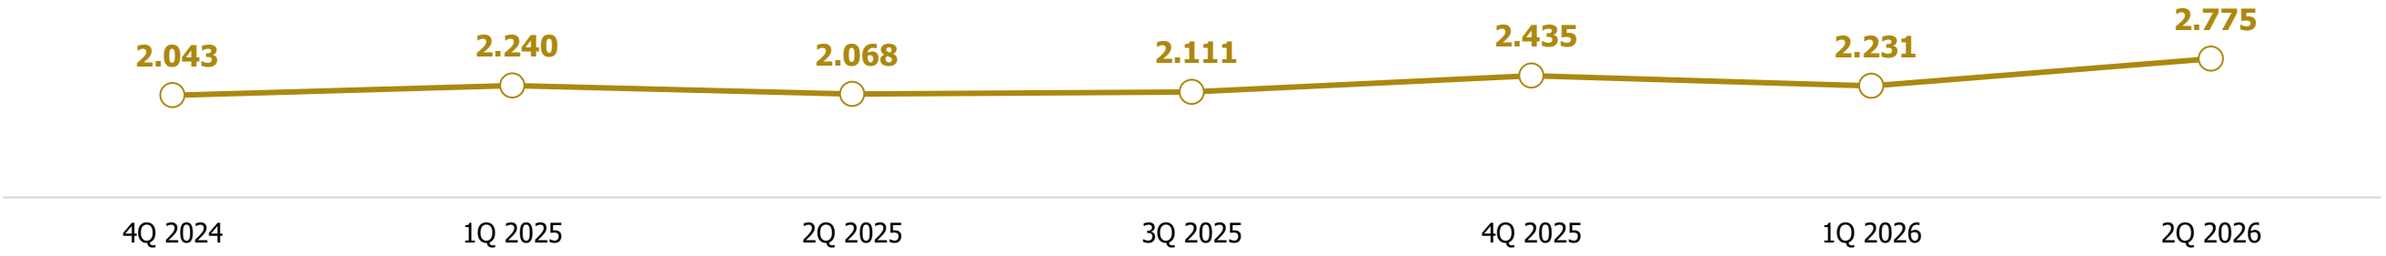
Operating RASK(1)

Unit: THB per ASK



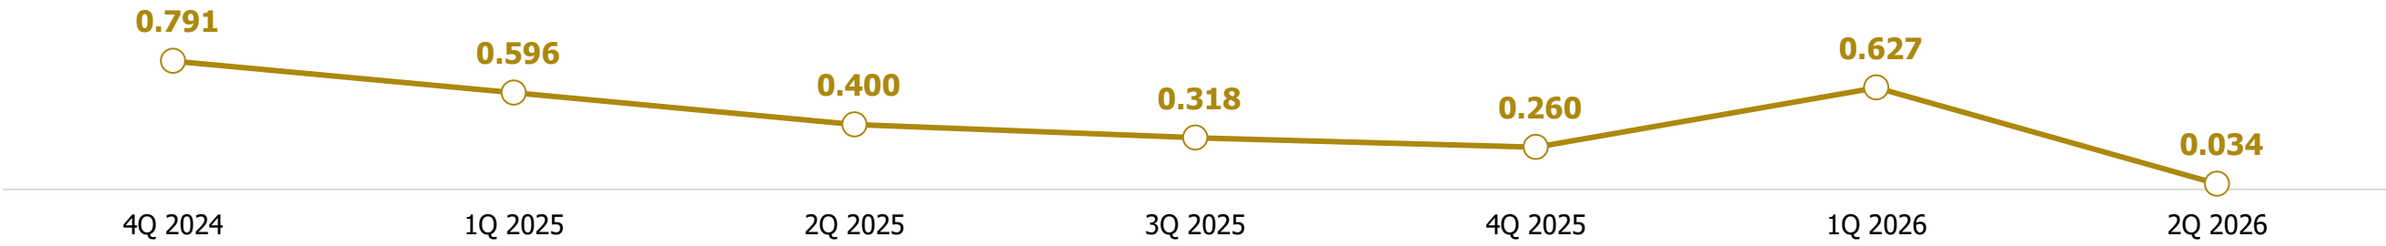
Operating CASK(2)

Unit: THB per ASK



Spread (Operating RASK – Operating CASK) (2)

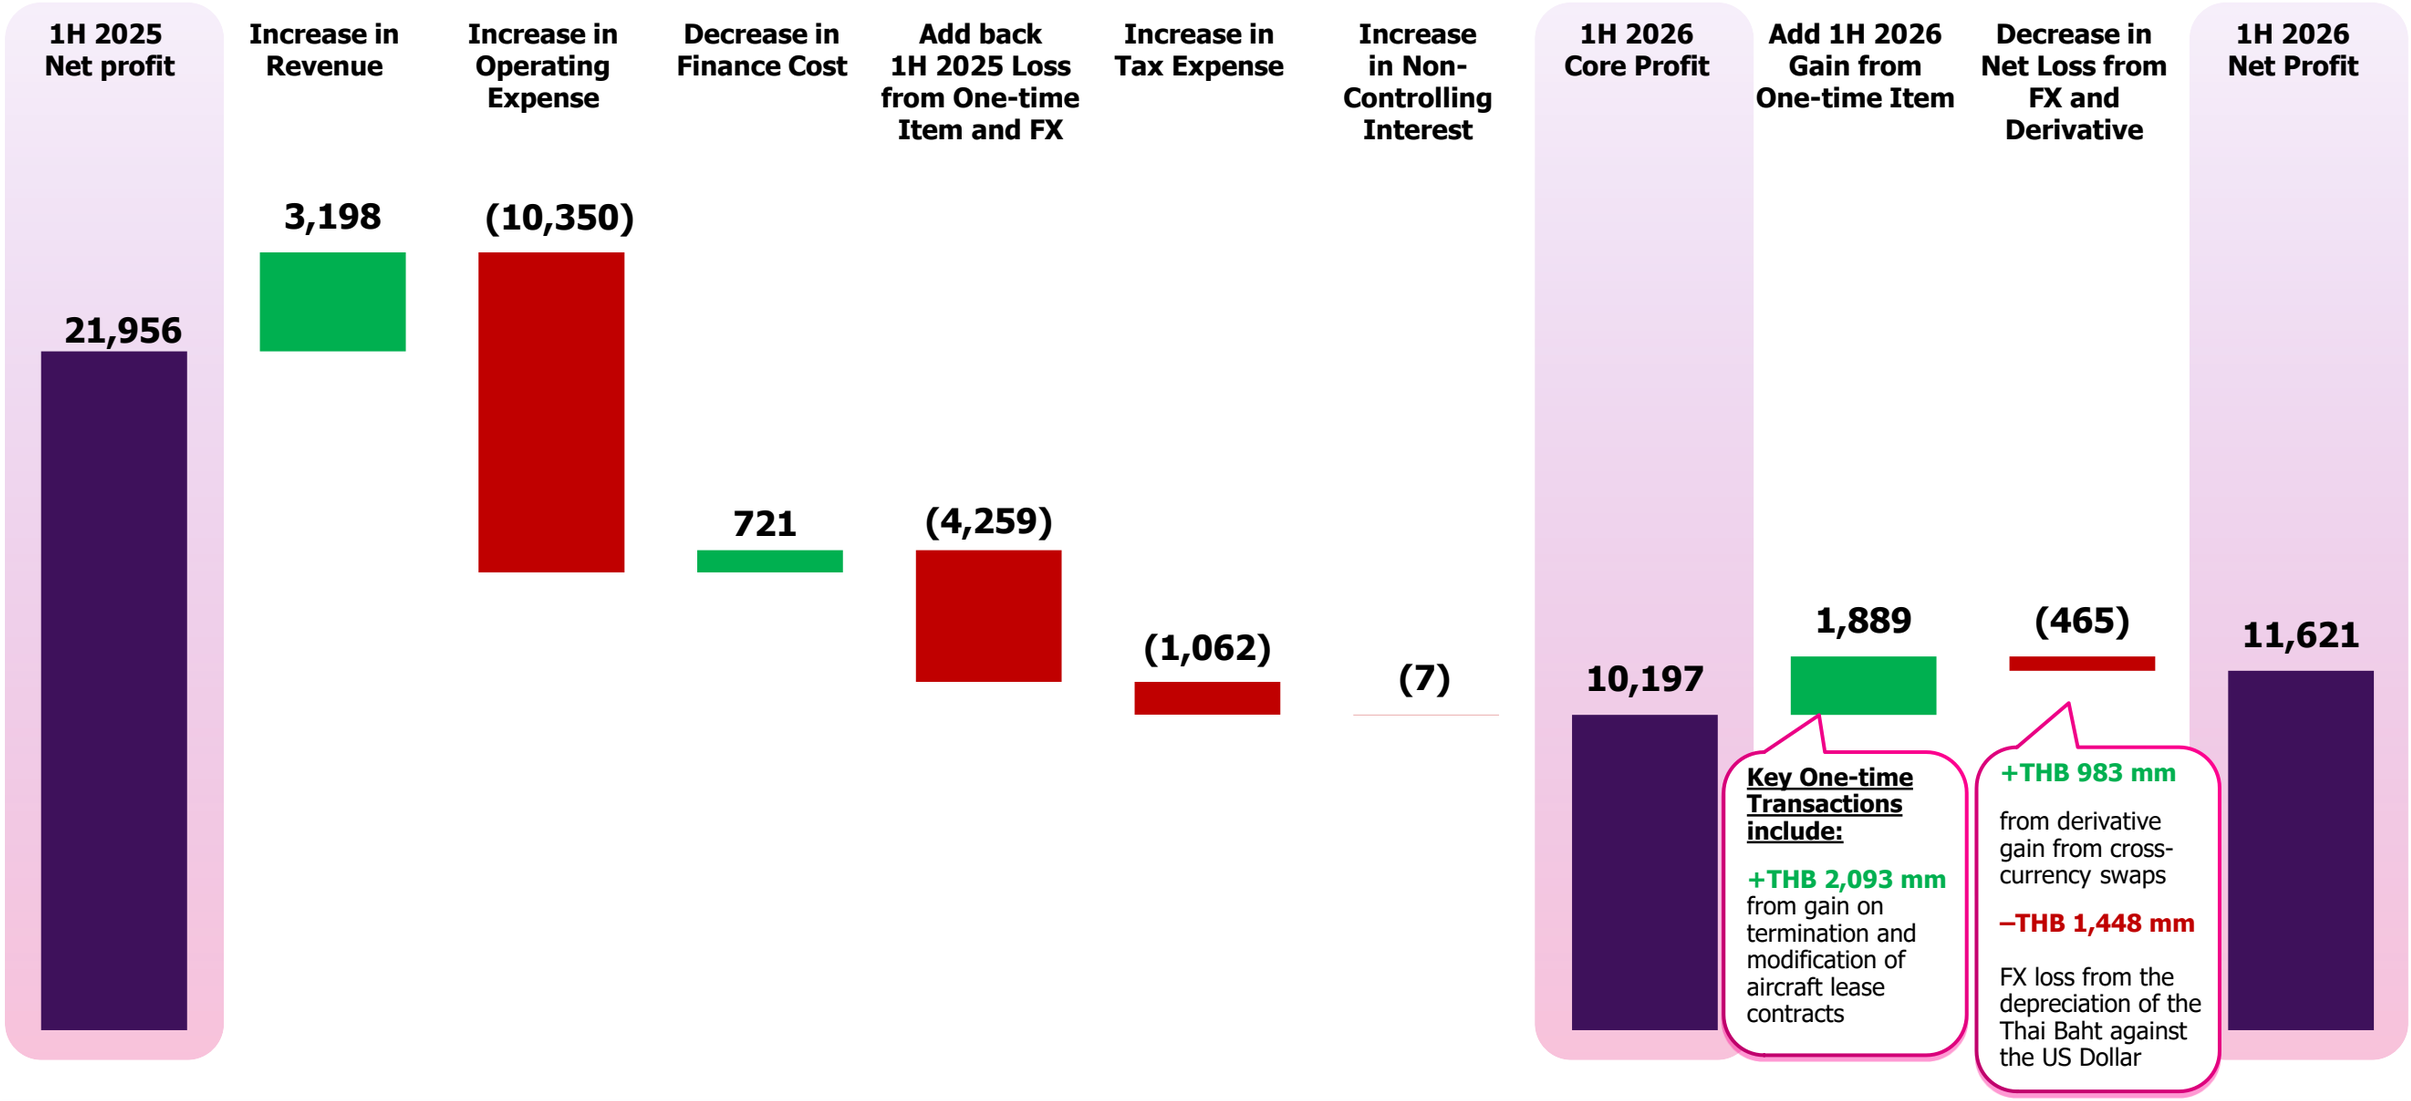
Unit: THB per ASK



Remarks: (1) Operating RASK is calculated from revenues from sales and rendering of services divided by ASK for each period
(2) CASK includes finance cost on lease liability due to adoption of TFRS16

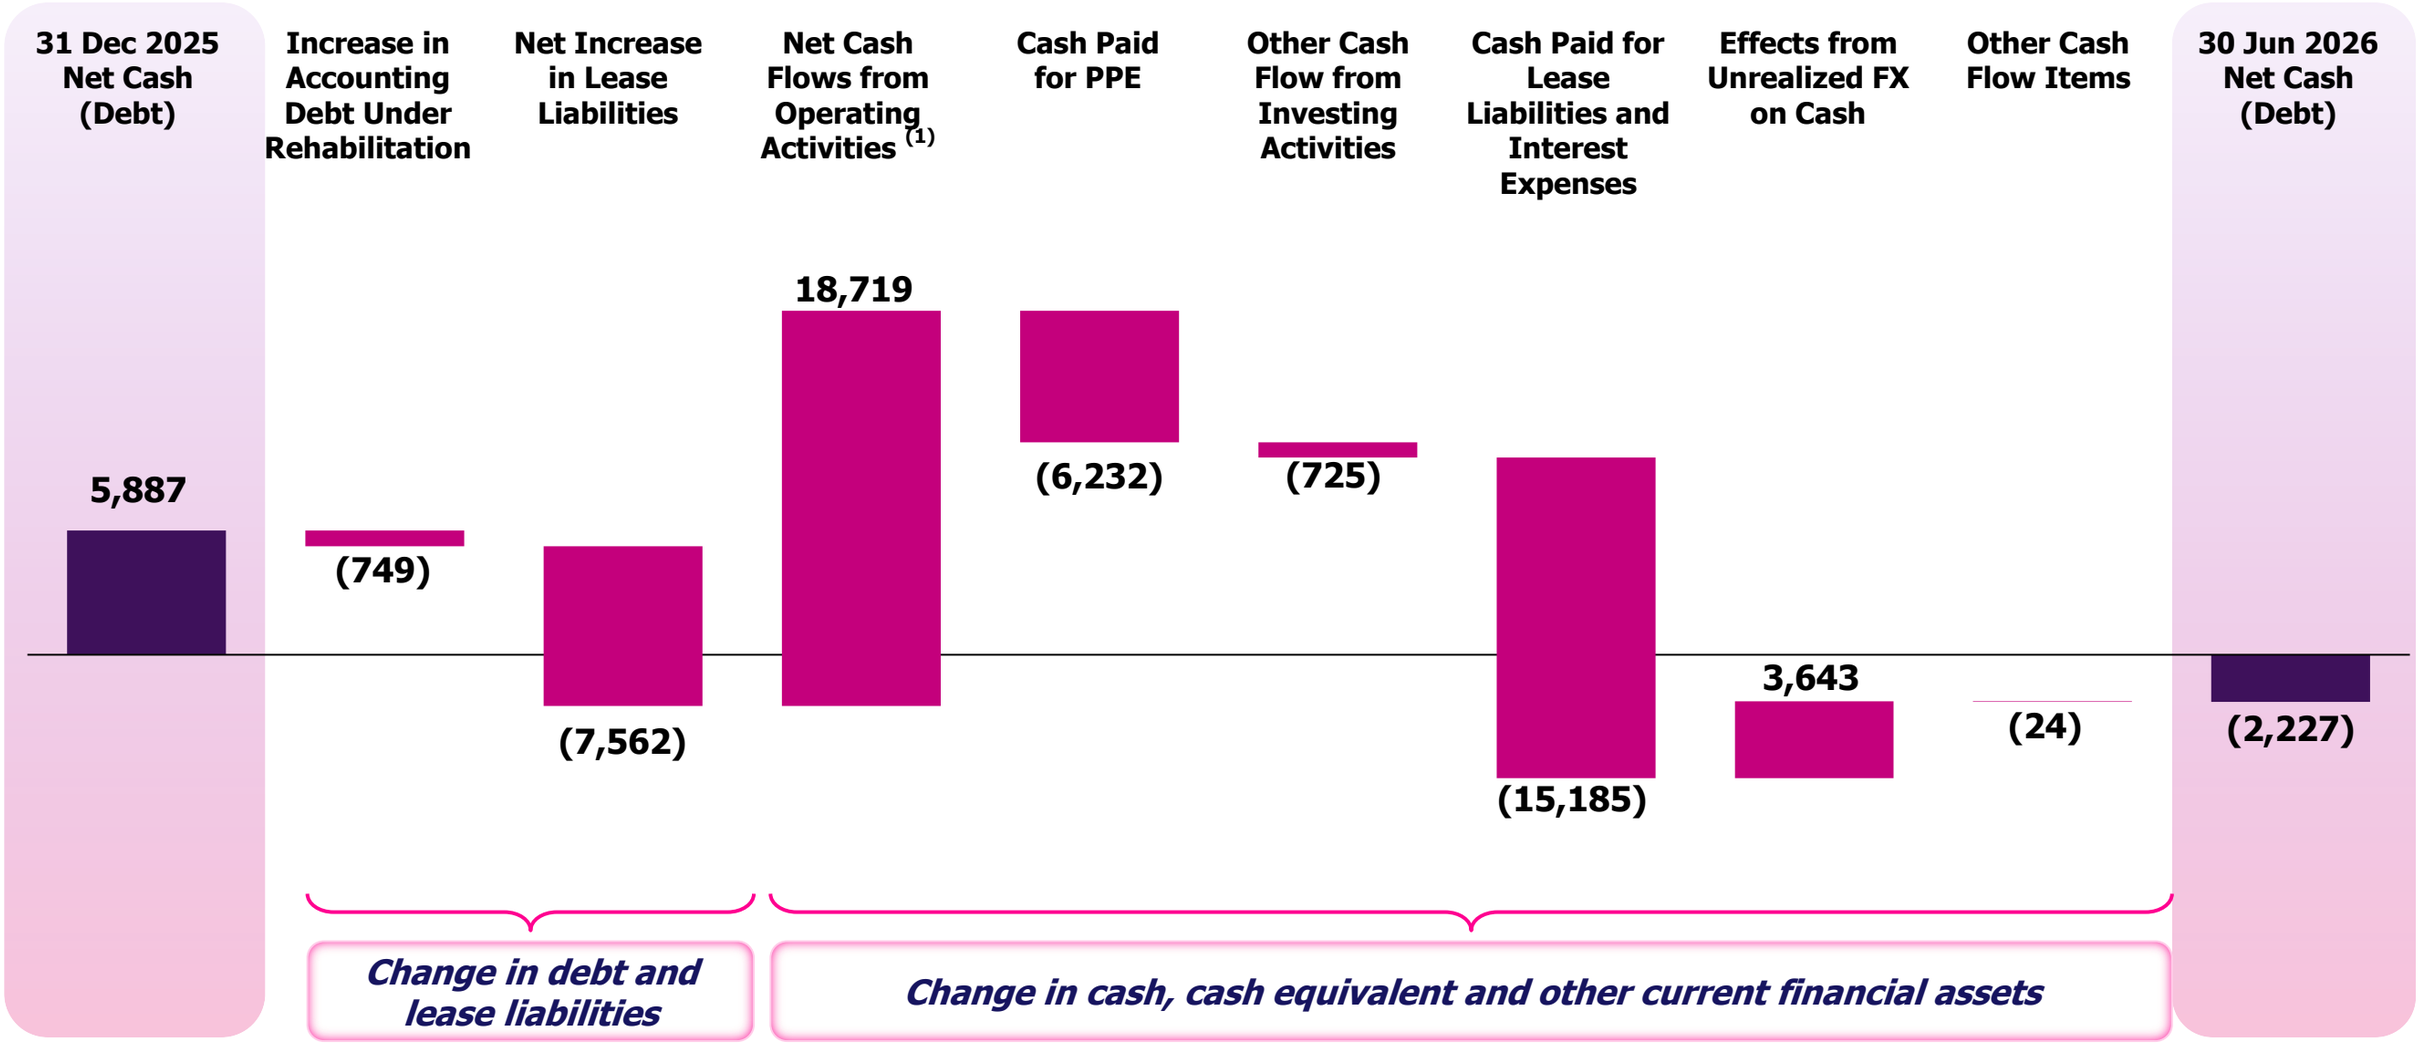
1H 2026 Net Profit Compared to 1H 2025

Unit: THB mm



1H 2026 Financial Position Compared to FY 2025

Unit: THB mm

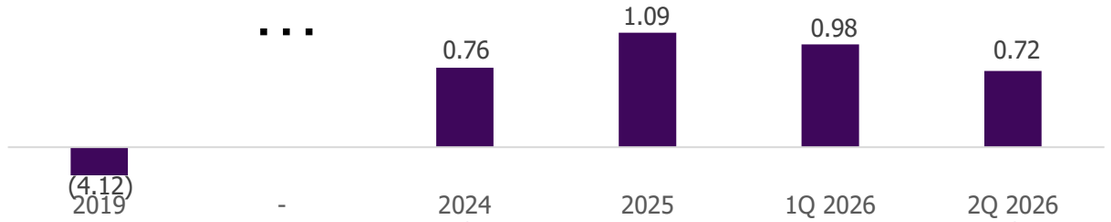


Remark: (1) Net of increase in other current financial assets

Key Financial Ratios

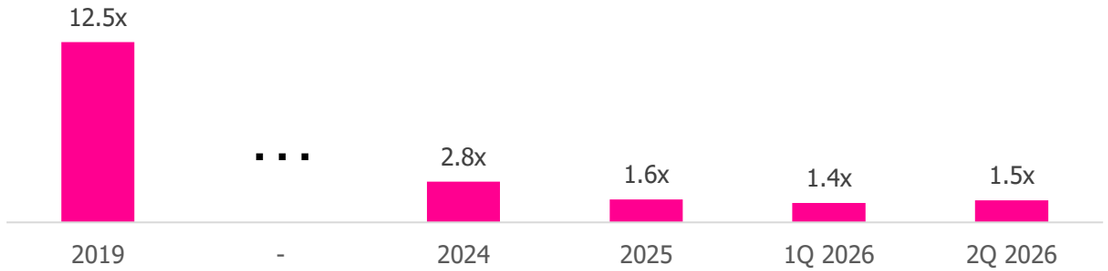
12M EPS *(THB/share)*

EPS is calculated from previous 12 months adjusted net profit attributable to THAI (excl. one-time items) divided by no. of shares at the end of each period

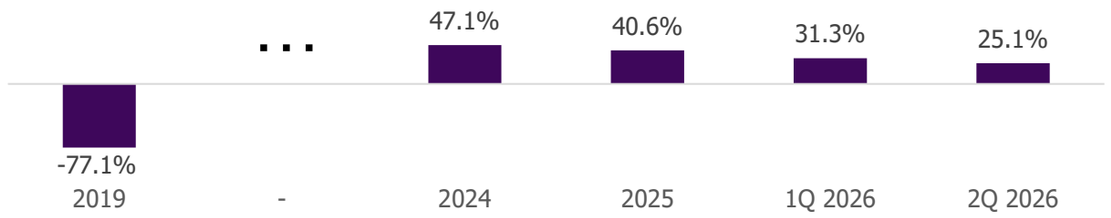


EPS calculated based on current number of shares of 28,303 shares mn

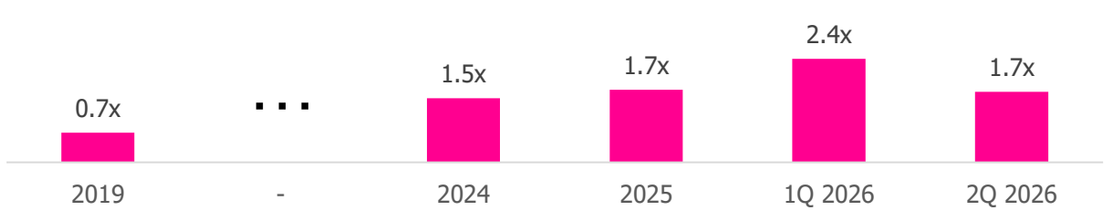
IBD/E[2] *(times)*



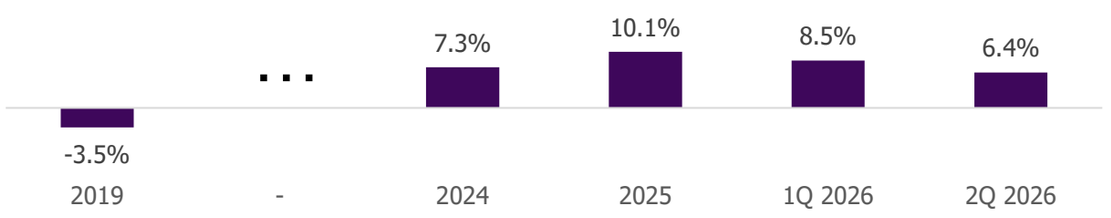
12M ROE[1] *(%)*



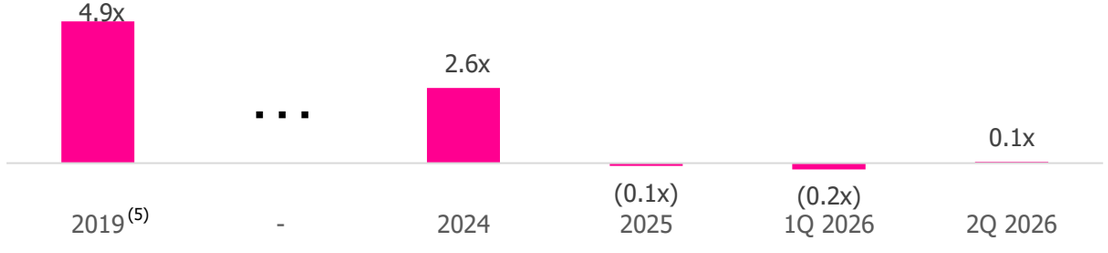
DSCR[3] *(times)*



12M ROA[1] *(%)*



Net Debt to EBITDA[4] *(times)*



Remarks: (1) ROE and ROA is calculated from previous 12 months adjusted net profit attributable to THAI (excl. one-time items) divided by the Company's Shareholders' Equity and Assets respectively; (2) Interest Bearing Debt includes lease liabilities, long-term borrowings, and debentures; (3) Debt service coverage ratio is calculated from EBITDAR divided by long-term loan repayment and lease liabilities, interest payment, and lease of aircraft and spare part; (4) Net Debt to EBITDA is calculated from total liabilities less cash and cash equivalents and other financial assets divided by previous 12 months EBITDA; (5) For comparability, 2019 EBITDAR is used prior to the adoption of TFRS 16

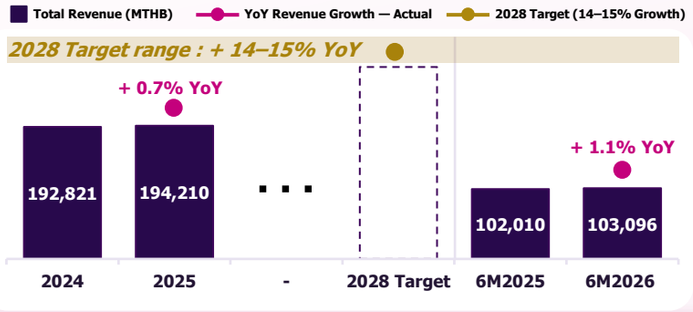
Progress Report for Jump+ Plan : 6M2026

BUSINESS PLAN

✓ On track

Growth Plan / Increase Business Value

Enhance long-term competitiveness through appropriate capital structure management



Optimize its flight network by focusing on increasing destinations and frequencies om profitable routes, along with adjusting aircraft types and sizes

EXPECTED OUTCOME

- Passenger load factor improved significantly
- CASK reduced through more optimized aircraft utilization
- Core-route revenue up; operating cash flow stayed positive

ACTUAL DATA

- Boeing 787-9 delivery scheduled Jun 22, 2026 — 4 aircraft entering service in 2026
- Bangkok–Amsterdam service launches Jul 1, 2026 ("Amsterdam & Beyond" multi-city fares)
- ASK adjusted to offset Middle East-driven cost pressure; fare/surcharge changes lifted yield YoY

Establish and expand cooperation with strategic partners

EXPECTED OUTCOME

- Expanded codeshare/interline on main & feeder routes
- Higher load factor & fleet utilization via partner networks
- Collaboration revenue up; unit costs down via shared resources

ACTUAL DATA

- Launched "Junior Sky Explorers" mascot and "Rise to Gold" ROP campaign (Jun 1–Nov 30, 2026)
- Added "Add Trip" feature on the THAI Mobile App
- Signed MOU with Air India to strengthen Thailand–India connectivity

GOVERNANCE PLAN

✓ On track

Enhancing anti-corruption and fraud prevention efforts

TARGET

- Achieve CAC certification from the Thai Institute of Directors (Thai IOD)

STRATEGIC INITIATIVE

- Develop written policies and practices

ACTUAL DATA

- Certified

ACTUAL DATA

- Upon approval from the Board of Directors at the 8/2026 meeting on Tuesday, August 11, 2026

Enhancing prevention of conflicts of interest

STRATEGIC INITIATIVE

- Monitoring compliance with the conflict of interest policy

ACTUAL DATA

- Directors, executives, and employees have fully completed 100% disclosure report for 2026.

Formulation of a succession plan for the critical roles

TARGET

- Engage an expert to evaluate Human Capital ROI (HCROI)

ACTUAL DATA

- Currently being studied.

CLIMATE ACTION PLAN

✓ On track

THAI reports its greenhouse gas emissions under the **ISO 14064-1 standard**, prepares its **Corporate Carbon Footprint (CFO)** per **Thailand's Greenhouse Gas Management Organization (TGO),** and complies with **CORSIA and the EU ETS.**

588.42
GHG emissions in the base year 2025 (tCO_2e/ATK)

Solar Rooftop

EXPECTED OUTCOME

- Electricity can be supplied to the system from July 2026 onwards (~600 tCO_2e/yr reduction target)

ACTUAL DATA

- PV system live since Feb 2026; 544,926 kWh generated cumulative (as of Jun 2026)
- ~259 tCO_2e avoided, based on grid emission factor 0.475 $kgCO_2e$/kWh

Sustainable Aviation Fuels (SAF)

EXPECTED OUTCOME

- Increase SAF blending by 0.5–1% at selected airports

ACTUAL DATA

- 0.77% of CORSIA-scope international departures used SAF

EV / Hybrid Vehicles

EXPECTED OUTCOME

- Replace internal combustion engine vehicles with hybrid/EV

ACTUAL DATA

- 10 vehicles converted
  (10 electric Catering Vehicle Belt Loaders, Ground Services Dept.)
- 30 more EVs in procurement, targeted for delivery by end-2026

Focusing Sustainability Strategies, Considering Growth Alongside Society and Environment

We are Committed to Achieving the 2050 Net Zero Emission Goal by Integrating Sustainable Developments Goals into Our Sustainability Strategy, Considering Growth alongside Society and Environment

Fleet Modernization

Introducing new fuel-efficient aircraft to replace aging fleets

Sustainable Aviation Fuel (SAF) Adoption

Promoting the use of sustainable aviation fuel.

Net Zero carbon emission by 2050

Operational Efficiency Improvements

Including techniques such as single engine taxiing, optimized flap settings for braking, and flight path optimization

Market-Based Measures

Participating in market-based mechanisms to offset greenhouse gas (GHG) emissions

Sustainability Development in Q2 2026

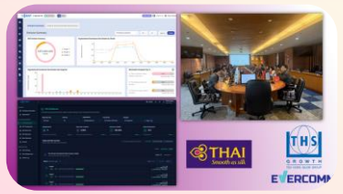
THAI carried out Sustainable Aviation Fuel (SAF) uplift operations as follows:

- SAF uplift in the European Economic Area (EEA)
- SAF uplift in the United Kingdom (UK)
- SAF uplift in Denpasar (DPS)
- SAF uplift in the Switzerland (ZRH)
- SAF uplift in the Norways (OSL)

THAI initiated its first carbon offsetting initiative under CORSIA Phase 1 by retiring 1,300 tCO_2 of carbon credits.

Puff & Pie Elevates Premium Packaging Through Sustainability

Puff & Pie enhances its premium brand image with sustainable Grab & Go packaging. Made from Good Grade paper and water-based inks, the recyclable design cuts plastic use and food waste, protects products during delivery, and improves consumer convenience.



Sustainability Platform

THAI centralized sustainability platform integrates sustainability data from across the organization into a single, reliable source, enabling efficient monitoring, analysis, planning, and strategic decision-making. It also helps reduce data duplication and human errors from manual data management, while improving data accuracy and consistency to support continuous improvement in sustainability performance.

Key Activities

THAI to AMSTERDAM

THAI Inaugurates Direct Bangkok – Amsterdam Route

THAI launched an inaugural flight on the Bangkok – Amsterdam route on July 1, 2026, marking a return to the destination after 28 years. Executive leadership hosted a ceremony at Suvarnabhumi Airport, presenting commemorative gifts to passengers. THAI operates daily non-stop flights between Bangkok and Amsterdam, offering seven flights per week with the Airbus A350-900, featuring comprehensive onboard amenities and a convenient flight schedule.

Boeing 787-9 Dreamliner HS-TWE

THAI Strengthens Fleet with Boeing 787-9 to Enhance Operational Efficiency and Passenger Experience

THAI is expanding its fleet with the addition of four Boeing 787-9 aircraft scheduled for delivery within 2026, beginning with the first arrival on June 22, 2026. The strategic expansion aims to improve fleet commonality, boost operational flexibility, and meet growing demand across high-potential long-haul routes.The modern wide-body aircraft offers approximately 20% higher fuel efficiency compared to previous-generation models, directly supporting THAI's sustainable fleet development goals.

Source: Company Information

Key Activities

THAI X Air India

THAI and Air India Partner to Expand Flight Networks

THAI and Air India signed an MoU on June 7, 2026, at the IATA AGM in Rio de Janeiro to establish a codeshare partnership. Pending regulatory approvals, the airlines will place their TG and AI codes on each other's flights between Thailand and India, as well as select international routes across Asia, Europe, and North America, offering passengers seamless travel and expanded connectivity.

Partner on Sustainable Aviation Fuel (SAF)

THAI and Bangchak Group Supply Thailand-Produced SAF for the First Time, Advancing a Low-Carbon Aviation Industry

THAI and Bangchak Group completed the inaugural refueling of domestically produced HEFA-SPK Sustainable Aviation Fuel (SAF) into flight TG409 (Bangkok–Singapore). Sourced from Thailand's first stand-alone SAF production unit operating since May 2026 with a daily capacity of 1 million liters, the fuel is derived from used cooking oil and reduces lifecycle greenhouse gas emissions by up to ~80% under ISCC CORSIA and ISCC EU standards.
